General Information

Caring for Soft Finishes

Polished Brass, Antique Bronze and Antique Brass products are coated with a high quality lacquer to ensure that you receive them in factory condition. DO NOT CLEAN WITH A METAL POLISH OR ABRASIVE CLEANER, as this will damage the lacquer and cause discolouration of the product.

In time, the protective lacquer may deteriorate either from exposure to weather, extremes of climate, frequency of use or other factors. The resulting tarnishing of the finish is not a defect but a normal process which is unavoidable.

The life of the lacquer may be prolonged by regular washing with soap and water followed by an application of wax polish.

Should this coating break down, all traces of lacquer must be removed by use of paint stripper, acetone or nail polish remover. The item may, if Polished Brass, then be cleaned with metal polish or other recommended cleaner and left unlacquered. If the item has a Plated finish as Antique Brass or Antique Bronze do not apply any cleaners or polish to the unlacquered surface.

As with the Polished Brass finish you may wish to apply a fresh coat of lacquer after thorough cleaning. Damage caused to metal finishes by acid and other solvents or chemicals, whilst cleaning brickwork, etc, can be identified as such and this Company will not accept any warranty claims where this has occurred.

Please ensure your door furniture is adequately protected during construction.

It is recommended that door fittings be removed prior to the application of paint, varnish or other forms of protective coatings to doors and surrounding areas.

Disclaimer for Brass Products

When installed correctly Lane Security products will provide trouble-free security for many years. The appearance may, depending on location, handling and other atmospheric conditions assume a worn look (i.e. tarnish) which in no way means a faulty product, but a natural process of the protective lacquer breaking down. This product has a baked on clear lacquer that will retard the tarnishing process but will not prevent it entirely. The following are preventative and restorative measures that will ensure a lustrous look.

From New:

1. Periodically, with a soft cloth wipe clean and polish with a quality non-abrasive wax or polish.
2. Never use abrasive cleaners or coarse polishes on Brass products with a coating.

To Restore:

(Note: If the brass hardware is severely pitted or corroded, the brass cannot be completely restored)

1. Remove door hardware from the door.
2. Strip off remaining lacquer with acetone or similar, then polish to desired lustre with brass polish.
3. Then apply a clear fast drying pressure pack lacquer i.e. "Incralac" or similar to seal the surface.
4. About 2 weeks after the new clear coat has hardened apply a coat of clear furniture polish that is non-solvent, non-acetic acid and non-alcoholic. Wipe dry with clean, dry cloth then polish every other month to assure continued protection.
5. If tarnish re-occurs over time repeat all the above. To ensure longer life to finish avoid:
 - a. Contact with brick cleaning solution or other solvents.
 - b. Remove Door Handle completely when painting or repainting doors. Allow door surface to dry completely before reassembling.

We hope this information will help in the event of the brass surface tarnishing which in no way indicates a faulty product and therefore obviates any claims for such.

Special Keying Services (refer to pg49 for special keying prices)

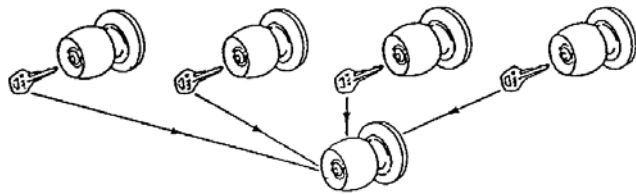

Keyed Alike:

In a Keyed Alike system one key can be made to operate a number of different locks such as padlocks, mortise locks, knob sets and "Key-In-Lever" sets. A simple example of a keyed alike system would be to have, in a residence, the front and back doors, garden gate and shed all operated by the same key.

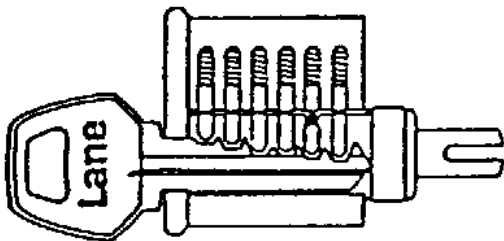

Maison Keying:

Maison Keying is widely used in blocks of home units, hotels, motels, etc. There are a number of locks each having their own key which will not operate any other tenant's lock, but all these keys will operate certain common locks such as entrance or laundry doors. Maison Keying can be incorporated into a master keyed system.

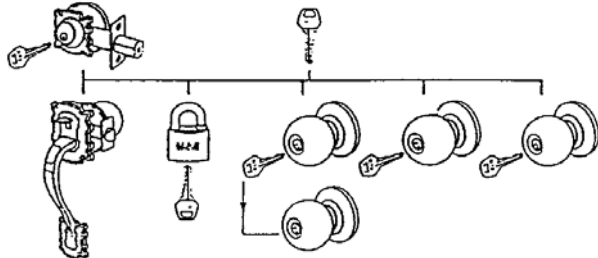

Construction Keying:

Construction Keying is a security system which allows subcontractors, electricians, plumbers, etc., access through all locks while building is in progress. On completion the first turn of the owner's key automatically changes the pin combination, thereby making all construction keys inoperative. Double Construction Keying is also available for people such as real estate agents. When the building is completed and the first construction key is kicked off (eliminating tradesmen's access) the real estate agent still has access until the owner's key kicks off the double construction key.

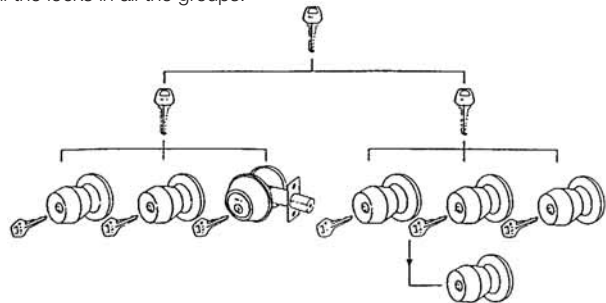

Master Keying:

In a Master Keyed system there are a number of locks each having their own individual key. None of these keys will operate any other lock apart from its own, but there is a master key that will operate all the locks in the system. It is so desired some locks can be keyed alike within the system and yet still operate by the use of the master key.

Grand Master keying:

A Grand Master keying system has two or more master keyed systems and each group operates individually as with the master system above. The master keys will operate all the locks within their own system but not in other systems. However, there is a Grand Master key that will operate all the locks in all the groups.

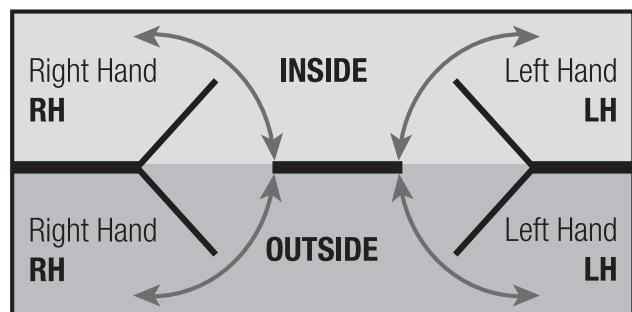

Handing a Door

HOW TO DETERMINE THE HANDING OF A DOOR

- The hand of a door is always determined by facing the OUTSIDE of a door, when the door is closed
- If the hinge is on the left side of the door, the door is Right Hand (RH).
- If the hinge is on the right side of the door, the door is Left Hand (LH).

To order a handed product, specify LH or RH.

Not all products are handed; only specify handing when required.
