

Hints & Tips

Plasterboard Screws - Zenith

- * When fixing plasterboard, slightly recess the head of the screw to ensure a clean, flush finish once the plaster is applied.
- * Typically 10mm plasterboard is used for wall lining and 13mm for ceiling applications.
- * When fixing plasterboard ensure fixing points are 10-16mm in from the edge.
- * Screw every 300mm, at sheet ends and around all doors and window. This means a 2400 x 1200mm sheet would require 30 fixing point per sheet including adhesive.
