

## Installation Instructions

### Improved Latch

Improved pattern gate latch with extended lever allows for easier opening.  
Designed to accommodate a padlock for security.

1. Position latch in desired location. Bar is attached to gate at a suitable height. Latch is attached to fence post. Check that product will function as desired.
2. Position latch on post and fasten using a No.2 Phillips bit at 1,000 RPM and self-drill screws provided (alternatively you can use a standard screwdriver). Mark holes for screws, drill pilot holes and fasten using screws provided and a Phillips head screwdriver.
3. Fit bar to gate using the same method used to attach the latch.
