

SPECIALTY FASTENERS NUTS

DOMES NUTS STAINLESS STEEL

BPIR Declaration

Version: 1

Designated building product: Class 1

Declaration

ITW New Zealand Ltd. has provided this declaration to satisfy the provisions of Schedule 1(d) of the Building (Building Product Information Requirements) Regulations 2022.

Product/system

Name	Specialty Fasteners Nuts
Line	Dome Nuts Stainless Steel
Identifier	EBQ1005,EBQ2005,EBQ2006,EBQ2010

Description

ZENITH® 316 Stainless Steel Dome Nuts are perfect for decorative purposes, by helping to conceal protruding fastener ends when used atop Hexagonal Nuts. Suitable also to be used alone for general purpose fastening applications. Designed specifically to be used in conjunction with Whitworth threaded Bolts. 316 grade stainless steel provides ultimate corrosion resistance* for internal and external use, including coastal applications.

Scope of use

Pair with Whitworth threaded Bolt.

Highly versatile; they are used in furniture assembly, timber panelling, perspex installations and more.

Conditions of use

For internal and external use, including coastal applications.

*Compared to 304 Stainless Steel and hot dipped galvanised steel.

Relevant building code clauses

B1 Structure - B1.3.1, B1.3.2, B1.3.3 (b, d, e, f, g, h, j, q), B1.3.4

B2 Durability - B2.3.1 (a)

F2 Hazardous building materials - F2.3.1

Contributions to compliance

DIN 1587.

Supporting documentation

The following additional documentation supports the above statements:

None added. For further information supporting Specialty Fasteners Nuts claims refer to our website.

Building code performance clauses

BI Structure

BI.3.1

Buildings, building elements and *sitework* shall have a low probability of rupturing, becoming unstable, losing equilibrium, or collapsing during *construction* or *alteration* and throughout their lives.

BI.3.2

Buildings, building elements and *sitework* shall have a low probability of causing loss of amenity through undue deformation, vibratory response, degradation, or other physical characteristics throughout their lives, or during *construction* or *alteration* when the *building* is in use.

SPECIALTY FASTENERS NUTS**DOME NUTS STAINLESS STEEL**

B1.3.3

Account shall be taken of all physical conditions likely to affect the stability of *buildings*, *building elements* and *sitework*, including:

- (b) imposed gravity loads arising from use
- (d) earth pressure
- (e) water and other liquids
- (f) earthquake
- (g) snow
- (h) wind
- (j) impact
- (q) time dependent effects including creep and shrinkage

B1.3.4

Due allowances shall be made for:

- a. the consequences of failure,
- b. the intended use of the *building*,
- c. effects of uncertainties resulting from *construction* activities, or the sequence in which *construction* activities occur,
- d. variation in the properties of materials and the characteristics of the site, and
- e. accuracy limitations inherent in the methods used to predict the stability of *buildings*

B2 Durability

B2.3.1

Building elements must, with only normal maintenance, continue to satisfy the performance requirements of this code for the lesser of the *specified intended life* of the *building*, if stated, or:

- (a) the life of the building, being not less than 50 years, if: those building elements (including floors, walls, and fixings) provide structural stability to the building, or those building elements are difficult to access or replace, or failure of those building elements to comply with the building code would go undetected during both normal use and maintenance of the building

F2 Hazardous building materials

F2.3.1

The quantities of gas, liquid, radiation or solid particles emitted by materials used in the construction of buildings, shall not give rise to harmful concentrations at the surface of the material where the material is exposed, or in the atmosphere of any space.
